

Polywater[®] Duct Sealant

A watertight, strong, resilient and chemically resistant seal

Application

Duct Seal/Water Block Kit (FST-180-KIT)

Contains a cartridge filled with a two-part foam base that, when injected, expands and hardens, keeping out water, acids, greases, insects, rodents, etc. It has good wetting and adhesion to metals, plastics, and concrete.

The kit contains enough material to seal up to 3 large ducts. A separate, reusable, ratchet application tool is used to inject the foam.

The foam base is mixed in equal parts as it is pushed through the mixing nozzle.

Features

- Seal water or other contaminants out of conduit/duct or central office
- Seal of cured foam is strong, resilient and chemically resistant
- Kit seals up to 3 large ducts (100mm)
- Foam expands and cures quickly even when water is present
- Two-part foam is mixed in nozzle as it is injected
- Cured foam is low density
- Cartridge injection system allows use of all foam base
- Cartridges are marked with volume graduations (notches)
