

## **TANK Earth Braid**

***The perfect continuity in a cable earthing system***

### **Application**

The flat 10m<sup>2</sup> copper braid conductor is used to complete the continuity in the cable earthing system. This, when clamped firmly, provides a low electrical resistance connection for a dependable shield bonding, and its physical strength substitutes as a strain relief across cables.

The earth braid can be supplied with or without eyelets, depending on the type of application required. The fitted eyelets can accommodate shield bonding connectors, with studs up to 6mm.

### **Features**

- Robust
- Non-corrosive
- Easy installation
- Earthing continuity
