

## **TUG** **Multi Entry Distribution Dome Closure**

### **Application**

TUG Multi entry distribution closure is a mechanical dome closure available in various sizes to suit your requirements.

The TUG is a multi entry system using the proven heatshrinkable system for sealing. Suitable for local and subscriber cable, jelly filled or air core cables. TUG's are suitable for direct buried, jointing pits and manhole applications. Each TUG incorporates two to five entry spigots and up to ten flexible distribution tails which are factory fitted with heatshrinkable sleeves.

The TUG's are supplied with or without a valve for flash testing, valves are fitted with corrosion protection valve covers. Galvanised wall or pole mounting brackets are available. Installation is installer friendly, simple, uncomplicated and no special tools are required.

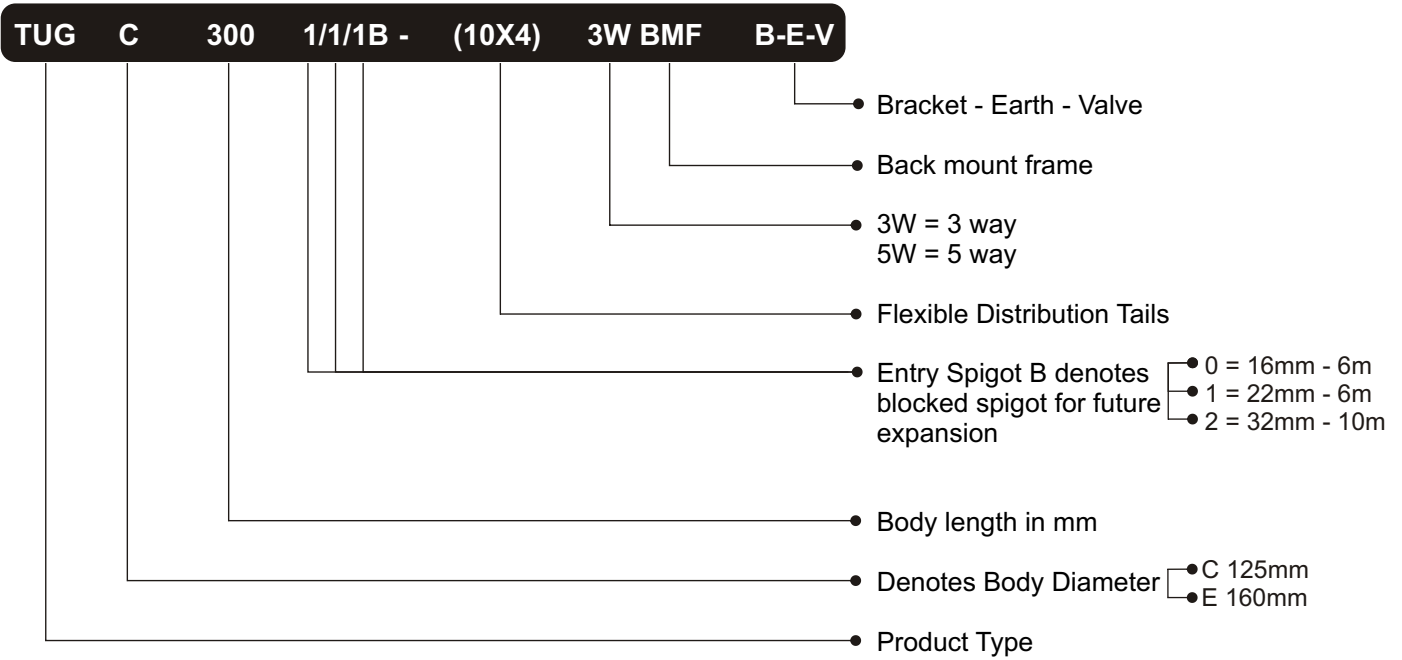

### **Features**

- Robust
- Durable
- Compact
- UV Stabilised
- Low cost installation
- Re-entry is simple and fast
- Locking facilities on closure clamp
- No special tools or sealing compounds required
- Suitable for underground, aerial and direct buried applications
